decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in plastic surgery when reconstruction is required following a burn or for cosmetic purposes. It is particularly useful in the treatment of abdominal wounds where there is high risk of infection. Truncated TrpRS promotes endothelialization in vascular graft surgery and is used in conjunction with angiography to administer the angiogenic tRNA synthetase polypeptides or polynucleotides directly to the lumen and wall of the blood vessel. The sequences given in AAB47615-18 show full length and truncated versions of trptophanyl-tRNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo balton molecular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated TrpRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or a solid tumor. Disclosure; Page 123-24; 150pp; English angiogenesis, New human truncated tyrosyl-tRNA synthetase polypeptide for regulating vascular endothelial function, in particular for regulating tumor metastasis and treating myocardial infarction

Novel truncated tryptophanyl-tRNA synthetase polypeptides capable of regulating vascular endothelial cell function, preferably angiogenesis, useful for treating solid tumor or suppressing tumor metastasis in

Example 1; Page 123-124; 149pp; English

CC truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann CC fold nucleotide binding domain and polynucleotides encoding them. The CC fold nucleotide binding domain and polynucleotides encoding them. The CC sequences are useful for regulating vascular endothelial cell function, preferably angiogenesis. Angiogenic TrpRS sequences are useful for treating full-thickness wounds (e.g. dermal ulcers, including pressure CC sores, venous ulcers and diabetic ulcers), burns and injuries. TrpRS cequences can also be used in plastic surgery when reconstruction is CC angiogenic TrpRS is also used in pastic surgery when reconstruction is CC angiogenic TrpRS is also used in association with surgery and following the damage of myocardial infarction and in CC conjunction with coronary bypass surgery by stimulating the growth of CC crimbunoassays to detect the presence of tumours. They are also used in conjunction with angiography. TrpRS antibodies are useful for blocking endogenous angiogenic activity and retard the growth of CC solid tumours. These antibodies may also be used to treat inflammation CC solid tumours. These antibodies may also be used to treat inflammation CC solid tumours. These antibodies may also be used to treat inflammation CC passed by increased vascular permeability. Inhibiting the activity of CC propriatis, diabetic retinopathy, all of which are characterised by complant treats. The present sequence is human truncated tryptophanyl t-RNA synthetase (mini TrpRS; residues 48-471 of cull-length TrpRS protein) protein in pET20B. The patent discloses human aminoacyl tRNA synthetases, particularly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tyrosyl-tRNA synthetase; TyrRS; Rossmann fold nucleotide binding domain vascular endothelial cell function; burn; plastic surgery; abdomen; polymorphonuclear leucocyte estatase; angiogenesis; tumour metastasis; angiogenesis; graft; myocardial infarction; solid tumour; wound healing dermal ulcer; diabetic ulcer; endothelialization; tryptophanyl-tRNA synthetase; trpRS; vascular graft surgery.
The sequences given in AAB47615-18 show full length and truncated versions of trptophanyl-trNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of
                                                                                                                                                                                                                             New human truncated tyrosyl-tRNA synthetase polypeptide for regulating vascular endothelial function, in particular for regulating angiogenesis, tumor metastasis and treating myocardial infarction -

Truncated TrpRS is useful for regulating angiogenesis, tumor metastasis, enhancing angiogenesis to a graft, treating myocardial infarction, solid tumor, and a condition that would benefit from increased or decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds such as dermal ulcers, diabetic ulcers, burns and injuries and in plastic surgery when reconstruction is required following a burn or for cosmetic purposes. It is particularly useful in the treatment of abdominal wounds where there is high risk of infection. Truncated TrpRS promotes endothelialization in vascular graft surgery and is used in conjunction with angiography to administer the angiogenic tRNA wall of the blood vessel.

realing agents for re-vascularising damaged tissues. They are useful for treating full-thickness wounds (e.g. dermal ulcers, including pressure sores, venous ulcers and diabetic ulcers), burns and injuries. TTPRS sequences can also be used in plastic surgery when reconstruction is required following a burn, other trauma, or even for cosmetic purposes. Angiogenic TrpRS is also used in association with surgery and following the repair of cuts, for promoting endothelialisation in vascular graft conjunction with coronary bypass surgery by stimulating the growth of conjunction with coronary bypass surgery by stimulating the growth of conjunction with surgery is also used in conjunction with angiography. TrpRS DNAs are useful in gene therapy. TrpRS antibodies are useful in gene therapy and retard the growth of conjunctions. These and solve and retard the growth of condit tumours. These antibodies may also be used to treat inflammation caused by increased vascular permeability. Inhibiting the activity of crops by antisense technology is useful for preventing further growth is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

             chromosome identification, as chromosome markers, and for numerous otl diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds ar infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                            Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58166 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cardioactive; immunomodulatory; muscular active; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynecological; antibacterial; diagnosis; neural disorder; immune disorder; r

                                                                                                                                                                                                                                                                                                                                                                                    07-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genes (crg or crgs). The products can be used to obtain agents which (be used for anti-viral therapy, particularly anti-HCMV therapy. They calso be used for the development of drugs that would allow for higher dosage IFN treatments without the concomitant toxicity normally associated with administering high levels of IFN. The products can also be used for detection, diagnosis and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is encoded by a human gene of the invention, and is induced to express by both HCMV and interferon (IFN), designated HCMV-inducible genes (cig or cigs). The invention also relates to genes that are repressed in the presence of HCMV infection, designated HCMV-repressible
                                                                                                        tryptophanyl-tRNA
                                                                                                                                                                                                                                                                                                                          Human supermini TrpRS.

It is of capable of regulating vascular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated CC TrpRS is useful for regulating angiogenesis, tumor metastasis, ce enhancing angiogenesis to a graft, treating myocardial infarction, combined the strong and a condition that would benefit from increased or complete in diagnosis and as a wound benefit from increased or complete strong and allocars, diabetic ulcers, burns and injuries and in ce plastic surgery when reconstruction is required following a burn or complete surgery when reconstruction is required following a burn or complete surgery enter there is high risk of infection. Truncated TrpRS conjunction with angiography to administer the angiogenic tRNA conjunction with angiography to administer the angiogenic tRNA capable or polynucleotides directly to the lumen and content of the blood vessel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

```

CC truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann CC fold nucleotide binding domain and polynucleotides encoding them. The CC invention also relates to tyrosyl t-RNA synthetases (TyrRS). TrpRS CC sequences are useful for regulating vascular endothelial cell function, CC preferably angiogenesis. Angiogenic TrpRS sequences are useful as wound CC healing agents for re-vascularising damaged tissues. They are useful as wound CC treating full-thickness wounds (e.g. dermal ulcers, including pressure CC sequences can also be used in plastic surgery when reconstruction is CC required following a burn, other trauma, or even for cosmetic purposes. CC Angiogenic TrpRS is also used in association with surgery and following the damage of mycardial infarction and in CC surgery and for repairing the damage of mycardial infarction and in CC transplanted tissue. TrpRS is also used in conjunction with angiography. CT TrpRS DNAs are useful in gene therapy. TrpRS antibodies are used in complex processes to detect the presence of tumours. They are also useful for blocking endogenous angiogenic activity and recard the growth of CC caused by increased vascular permeability. Inhibiting the activity of psociasis, diabetic retinopathy, all of which are characterised by antisense technology is useful for preventing further growth of CC processed continopathy, all of which are characterised by absorbed in truncated to treatinopathy. The process bunnal anciogenesis. The present segmence is bunnan truncated to abnormal anciogenesis. The present segmence is bunnan truncated to abnormal anciogenesis. abnormal angiogenesis. The present sequence is human truncated tryptophanyl t-RNA synthetase (supermini TrpRS; residues 71-47 full-length TrpRS protein) in pETZOB. The patent discloses human aminoacyl tRNA synthetases, particularly

Sequence

The sequences given in AAB47615-18 show full length and truncated versions of trptophanyl-tRNA synthetase (TrpRS). The truncated TrpRS of the invention comprises a Rossmann fold nucleotide binding domain, and is capable of regulating vascular endothelial cell function. It is of approx. 40 kilo Dalton molecular weight and is produced by cleavage of full length TrpRS with polymorphonuclear leucocyte elastase. Truncated TrpRS is useful for regulating angiogenesis, tumor metastasis, challed the polymorphonuclear leucocyte elastase or conlancing angiogenesis to a graft, treating myocardial infarction, condition, and a condition that would benefit from increased or decreased angiogenesis in a mammal, in particular humans. It is also useful in diagnosis and as a wound healing agent for treating wounds cuseful in diagnosis and as a wound healing agent for treating wounds concentic surgery when reconstruction is required following a burn or for commetic surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery when reconstruction is required following a burn or conscribed surgery and is used in conjunction with angiography to administer the angiogenic tRNA conscribed for polynucleotides directly to the lumen and conscribed the blood vessel.

                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ct truncated tryptophanyl-tRNA synthetases (TrpRS) comprising a Rossmann CC invention also relates to tyrosyl t-RNA synthetases (TyRS). TrpRS CC sequences are useful for regulating vascular endothelial cell function, cc preferably angiogenesis. Angiogenic TrpRS sequences are useful for regulating vascular endothelial cell function, cc preferably angiogenesis. Angiogenic TrpRS sequences are useful for tregulating vascular endothelial cell function, cc treating full-thickness wounds (e.g. dermal ulcers, including pressure cc sores, venous ulcers and diabetic ulcers), burns and injuries. TrpRS cs sequences can also be used in plastic surgery when reconstruction is crequired following a burn, other trauma, or even for cosmetic purposes. CC Angiogenic TrpRS is also used in association with surgery and following ct the repair of cuts, for promoting endothelialisation in vascular graft cs surgery and for repairing the damage of myocardial infarction and in cc onjunction with coronary bypass surgery by stimulating the growth of cransplanted tissue. TrpRS is also used in conjunction with angiography. CT TrpRS DNAs are useful in gene therapy. TrpRs antibodies are useful conjunction with angiography. CC solid tumours. These antibodies may also be used to treat inflammation caused by increased vascular permeability. Inhibiting the activity of TrpRS by antisense technology is useful for preventing further growth of conjunction with angiogenesis. The present sequence is human inactive tryptophanyl t-RNA synthetase (TrpRS) in pET20B.

                                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                              Sequence
                                                                                                                                                      The sequence data for this patent did not form specification, but was obtained in electronic f

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                               The invention relates to an isolated nucleic acid detection reagant capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0176-ABL30511), expressed DNA sequences (ABL0175) and the encoded proteins
                            sequences (ABL01840 (ABB57737-ABB72072)
                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila melanogaster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pharmaceutical.
